

.....

What is SSNAP?

This provider is involved in a project to make stroke care better.

We collect information about all stroke patients seen by this team and what care they receive.

This includes some confidential information. This information is used to improve stroke care provided by this team

This project is called the Sentinel Stroke National Audit Programme (SSNAP).

Information about
SSNAP

What it means for you
and your provider

England & Wales

.....

What is SSNAP?

All stroke care providers have to take part in this project to collect information about the care people who have had a stroke receive for 6 months.

This information will help find where improvements need to be made.

To make the best use of this information we need to collect confidential details about you:

- name
- date of birth
- postcode
- NHS number (everyone in the country has a unique number which is used by the NHS).

SSNAP

**Sentinel Stroke National
Audit Programme**

Why do we need to collect confidential details from you?

We can make better use of the information the hospital gives us if we can link it with other information, which is already collected about people in hospitals.

This will help to tell us about which care seems to work best. This is helpful as it will encourage hospitals to improve their services.

How will this confidential information be kept safe?

There are very strict rules about how such information is kept. The stroke care team sends the information using a very secure website.

Only a few selected people at each team can use it. These people need a password to see the information and they must agree to use the information properly.

The confidential information is converted into code and stored very safely. This means that it will not make sense to anyone who does not have the code.

Why have the hospital staff not asked for my permission to use my information?

Staff can ask, however, it would be very difficult to ask everyone for their permission just after they have had a stroke.

Some patients find it hard to communicate after they have had a stroke, some cannot speak and some won't have relatives with them. It is also a very distressing time for patients and asking patients about this project at this time may not be the most important priority.

We asked people who have had a stroke about this. They thought that it is a good thing as it may help improve services.

Can I refuse to give my information?

Yes. Just tell the person who gave you this leaflet or contact the SSNAP team.
